### THE PALM-SIZED FPV-COPTER!

This incredibly small and easy to fly quadcopter can be completely controlled by your mobile device and can also send the live stream from the integrated HD Camera to your device's display.

But there are more awesome features waiting to be explored. The Gravit Smart Vision FPV can start and land automatically by the tip of your finger. Also the headless and training modes make it even easier to keep the control over this powerful mini drone.

You can use it as a selfie drone with the altitude hold mode or flip it around in any room with the 360° looping function. Draw the flight course on your display and the Smart Vision will follow your route.

The transmitted video stream can be saved directly to your mobile device and is ready to be shared with the world!
